Question Bank

1st.

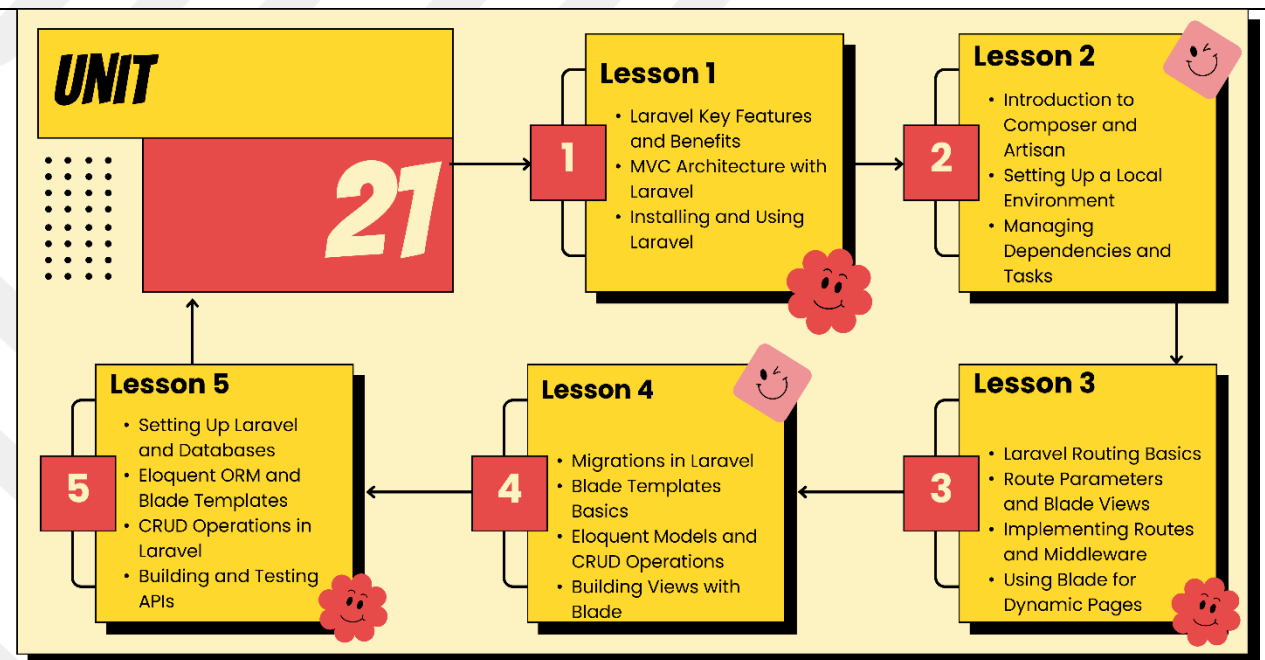

2024 - 2025

تطوير المواقع والبرمجيات Laravel Framework الصف الثالث

Unit	21
Name	Laravel
Goals / Outcomes	➤ <u>Remembering</u> 1. Recall the fundamental concepts and components of the Laravel framework, including its key features, tools, and directory structure. 2. Identify the purposes of core Laravel tools such as Composer, Artisan, Blade templates, and Eloquent ORM. 3. List the basic commands and syntax used for setting up Laravel projects, routes, controllers, and views. ➤ <u>Understanding</u> 1. Explain how Laravel integrates with PHP and its role in web application development. 2. Describe the MVC architecture and how Laravel implements this pattern. 3. Understand the purpose and usage of Laravel's routing system, Blade templating engine, and Eloquent ORM for managing database interactions. 4. Explain how Laravel handles dependencies and simplifies development tasks using Composer and Artisan commands. ➤ <u>Applying</u> 1. Install and configure a Laravel project, including setting up a local development environment and managing dependencies. 2. Write and implement Laravel scripts to manage routes, controllers, and views, and handle HTTP requests. 3. Utilize Laravel's Blade templating engine to create dynamic, reusable views. 4. Develop and manage database schemas using Laravel migrations and seeders. 5. Implement CRUD operations using Eloquent models to interact with databases. ➤ <u>Analyzing</u> 1. Compare Laravel with other PHP frameworks in terms of features, functionality, and performance. 2. Analyze the benefits of using Laravel's routing, templating, and ORM systems for building scalable and maintainable applications. 3. Evaluate different methods for structuring code and organizing application components to enhance reusability and maintainability. 4. Assess the impact of using Laravel's tools (e.g., Composer, Artisan, Blade) on development efficiency and security. ➤ <u>Evaluating</u> 1. Evaluate the performance and efficiency of Laravel applications under different scenarios. 2. Judge the clarity, maintainability, and scalability of Laravel applications using best practices in coding and architecture. 3. Assess the robustness and security of Laravel applications, particularly in handling HTTP requests, data validation, and database interactions.

	➤ <u>Creating</u> 1. Develop complete web applications using Laravel, demonstrating the integration of routes, controllers, models, and views. 2. Build dynamic web pages using Blade templates with layout inheritance, components, and conditional logic. 3. Create and manage database tables using migrations and implement RESTful APIs with Laravel to handle CRUD operations. 4. Design and implement scalable and maintainable web application structures following best practices in Laravel development.	
Knowledge	Code	Description
	TPK22	Analyze and solve common web applications tasks by writing PHP programs
Skill	Code	Description
	TPC5.7	Using controllers and routes for APIs and URLs
	TPC5.8	Creating and using composer packages
	TPC5.9	Create restful services, use an Effect Dependency Array and how to hand errors in data requests

Unit Preface

المعرفة	الكود
Analyze and solve common web applications tasks by writing PHP programs	TPK22

Dear learner: Put "True" in front of the correct statement and "False" in front of the incorrect statement.

No	Question	Answer
1	Laravel is a paid PHP framework.	False
2	Laravel follows the MVC architecture.	True
3	Laravel does not support built-in libraries.	False
4	Laravel provides built-in automated testing support.	True
5	MVC stands for Model, View, Controller.	True
6	Laravel does not enforce a separation between business logic and presentation.	False
7	Models in Laravel handle database interactions.	True
8	Views in Laravel are responsible for business logic.	False
9	Controllers act as an intermediary between Models and Views.	True
10	The default Laravel welcome page runs on http://localhost:8000.	True
11	The app/ folder contains frontend assets like CSS and JS.	False
12	Blade templates are stored in resources/views/.	True
13	The public/ folder is the entry point for Laravel applications.	True
14	Database configurations are stored in config/database.php.	True
15	The routes/ folder defines API and web routes.	True
16	All web routes are defined in routes/api.php.	False
17	Route parameters are defined using {} in Laravel.	True
18	Controllers are stored in app/Http/Controllers/.	True
19	The command php artisan make:controller creates a new controller.	True

20	Middleware can restrict access to routes.	True
21	Blade files use the .blade.php extension.	True
22	{{ \$variable }} escapes HTML by default.	True
23	Blade does not support loops and conditionals.	False
24	@yield is used to define a section in a layout.	True
25	@extends is used to inherit a layout.	True
26	Eloquent is Laravel's built-in ORM.	True
27	Migrations are used to modify database structure.	True
28	Factories generate fake data for testing.	True
29	Seeders populate the database with initial data.	True
30	Eloquent does not support relationships.	False
31	Laravel Breeze uses Bootstrap for styling.	False
32	CSRF protection is enabled by default in Laravel forms.	True
33	Policies are used for model-based authorization.	True
34	API resources format JSON responses.	True
35	Form validation in Laravel only checks for empty fields.	False
36	Flash messages persist across page refreshes.	False
37	Query Builder is an alternative to Eloquent for database queries.	True
38	Middleware cannot be used for authorization.	False
39	The php artisan route:list command displays all routes.	True
40	Blade layouts help avoid repeating HTML code.	True

Dear learner: Choose the correct answer.

No.	Question	Answer
41	What is Laravel? a) A JavaScript framework b) A PHP framework	b

	c) A CSS library d) A database system	
42	Which architecture does Laravel follow? a) MVP b) MVC c) MVVM d) Flux	b
43	What does Laravel's Eloquent ORM do? a) Handles HTTP requests b) Compiles CSS c) Manages database interactions d) Renders Blade templates	c
44	Which tool is used to manage Laravel dependencies? a) npm b) Composer c) Yarn d) Pip	b
45	What command starts the Laravel development server? a) php artisan start b) php artisan serve c) npm run dev d) composer serve	b
46	Where are web routes defined in Laravel? a) routes/api.php b) routes/console.php c) routes/web.php d) app/Http/routes.php	c
47	How do you create a controller in Laravel? a) php artisan create:controller b) php controller:make c) php artisan new:controller d) php artisan make:controller	d
48	What is the purpose of middleware? a) Style web pages b) Filter HTTP requests	b

	c) Seed databases d) Generate fake data	
49	Which method returns a view in Laravel? a) return view() b) return html() c) return blade() d) return render()	a
50	What does Route::resource() generate? a) A single route b) CRUD routes c) API endpoints d) Authentication routes	b
51	What is the extension for Blade files? a) .php b) .blade c) .blade.php d) .html.php	c
52	How do you escape output in Blade? a) {!! \$var !!} b) {{ \$var }} c) @escape(\$var) d) @{{ \$var }}	b
53	Which directive extends a layout in Blade? a) @include b) @extends c) @yield d) @section	b
54	How do you loop through an array in Blade? a) @for b) @loop c) @while d) @foreach	d
55	What does @yield do in Blade? a) Includes a file	b

	b) Defines a section c) Outputs a variable d) Extends a layout	
56	What are migrations used for? a) Storing session data b) Modifying database structure c) Rendering views d) Handling HTTP requests	b
57	Which command creates a migration? a) php artisan make:migration b) php artisan create:migration c) php artisan new:migration d) php migrate:make	a
58	What is the purpose of seeders? a) Generate fake data b) Define routes c) Create controllers d) Compile assets	a
59	Which relationship does hasMany() represent? a) One-to-One b) Polymorphic c) Many-to-Many d) One-to-Many	d
60	What is the default primary key in Eloquent? a) uuid b) id c) key d) primary	b
61	Which package provides Tailwind-based auth scaffolding? a) Laravel Breeze b) Laravel UI c) Laravel Jetstream d) Laravel Sanctum	a

62	What does the auth middleware do? a) Checks if a user is an admin b) Ensures a user is logged in c) Validates form data d) Hashes passwords	b
63	How is CSRF protection added to forms in Laravel? a) @protect b) @secure c) @form_token d) @csrf	d
64	Which command installs Laravel Breeze? a) composer require laravel/breeze b) npm install breeze c) php artisan install breeze d) composer create-project breeze	a
65	What is used to authorize user actions in Laravel? a) Policies b) Migrations c) Seeders d) Factories	a

Give the Scientific Name Questions:

No	Question	Answer
66	What design pattern does Laravel use to separate logic, UI, and processes?	MVC
67	Which Laravel tool helps manage packages and dependencies?	Composer
68	Which folder contains the main application code, such as models and controllers?	app
69	What is the name of Laravel's command-line tool for generating code and managing tasks?	Artisan

70	What is the syntax used in Blade to output a variable safely?	{{ }}
71	What is the term for passing dynamic values into routes using curly braces?	Route parameters
72	Which Laravel feature interacts with databases using PHP classes instead of raw SQL?	Eloquent ORM
73	What is the term for a gatekeeper that checks or modifies requests before they reach a route?	Middleware
74	What is the term for version-controlled files that modify database tables?	Migrations
75	Which tool generates fake data for testing in Laravel?	Factories
76	What is the term for classes that populate the database with initial or test data?	Seeders
77	What type of relationship exists when one record in a table links to multiple records in another?	One-to-Many
78	Which Laravel feature allows writing database queries using PHP instead of SQL?	Query Builder
79	What is the term for checking if submitted form data meets specific rules?	Form Validation
80	What is the temporary message shown after an action, like "Post Created!"?	Flash Message
81	What is Laravel's templating engine called?	Blade
82	Which directive in Blade is used to extend a layout?	@extends()
83	What security feature prevents cross-site request forgery attacks in Laravel forms?	CSRF Protection
84	Which Laravel package provides Bootstrap-based authentication scaffolding?	Laravel UI
85	What is the process of defining user permissions called?	Authorization

86	Which Laravel feature is used for model-specific authorization rules?	Policies
87	What is the term for general authorization logic not tied to a model?	Gates

Complete the Sentence Questions:

No	Question	Answer
88	Laravel is a free and open-source PHP framework that follows the -----design pattern.	MVC
89	The ----- tool is used to manage Laravel's dependencies.	Composer
90	The ----- syntax in Blade safely outputs variables.	{{ }}
91	Route parameters are defined using -----in the URL.	{ }
92	----- acts as a gatekeeper for HTTP requests.	Middleware
93	Database structure changes are managed using -----.	migrations
94	Fake data for testing is generated using -----.	factories
95	The ----- class populates the database with initial data.	Seeder
96	The ----- provides a fluent interface for database queries.	Query Builder
97	----- ensures user-submitted data meets specified rules.	Form Validation
98	A ----- appears temporarily after an action.	Flash Message
99	Blade layouts avoid code repetition using -----.	@extends().
100	Laravel's ----- prevents cross-site request forgery attacks.	CSRF Protection

101 Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	Eloquent ORM	A	A. Handles HTTP requests and returns responses	1-B
2	Blade Templating	B	B. Manages database interactions using PHP classes	2-C
3	3. Artisan CLI	C	C. Creates HTML templates with dynamic content	3-E
4	Middleware	D	D. Filters HTTP requests before they reach controllers	4-D
5	Migration	E	E. Generates code and manages Laravel apps via CLI	5-F
6	Controller	F	F. Defines database table structure changes	6-A

102 Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	app/	A	Stores CSS, JS, and images	1-C
2	routes/	B	Contains database table definitions	2-D
3	resources/views/	C	Holds models, controllers, and core logic	3-E
4	public/	D	Defines application URLs and endpoints	4-A
5	config/	E	Stores HTML templates (Blade files)	5-F
6	database/migrations/	F	Contains app configuration files	6-B

103 Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	GET	A	Create new data	1-B
2	POST	B	Retrieve data	2-A
3	PUT/PATCH	C	Delete data	3-D

4	DELETE	D	Update data	4-C
5	Laravel Breeze	E	Use Bootstrap 5	5-F
6	Laravel UI	F	Use Tailwind CSS	6-E

104 Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	@yield	A	Extends a layout	1-C
2	@section	B	Includes another view	2-E
3	@extends	C	Defines a placeholder in a layout	3-A
4	@include	D	Outputs escaped data	4-B
5	{{ }}	E	Defines a content block	5-D
6	@if	F	Conditional rendering	6-F

Dear Learner: Answer the following questions.

105	Question	What is Laravel?
	Answer	A free, open-source PHP framework for building web applications.
106	Question	What does MVC stand for in Laravel?
	Answer	Model, View, Controller.
107	Question	What command starts a Laravel development server?
	Answer	php artisan serve.
108	Question	Where are Laravel routes defined?
	Answer	In routes/web.php (for web) and routes/api.php (for APIs).
109	Question	What is Blade in Laravel?
	Answer	Laravel's templating engine for dynamic HTML rendering.

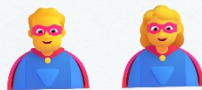

Dear Learner: Answer the following questions.

111	Question	What is Eloquent ORM?
	Answer	Laravel's database interaction system using PHP models instead of SQL.
112	Question	What is a migration in Laravel?
	Answer	A file that defines database table changes (create, modify, delete).
115	Question	What is CSRF protection in Laravel?
	Answer	Security feature preventing cross-site request forgery attacks.

NOTICE

If you come across a question that's been answered wrong, don't panic! Instead, be the hero we need and report it through this magical link.
